

## TRANSFORM YOUR LEARNERS' EXPERIENCE

Learning Pool Stream enables your organisation to deliver on the promise of a true 'learning culture' by delivering learning experiences that drive the behaviours needed today whilst building the skills that are needed to succeed tomorrow. **It does this by being simple, smart and social.**

### Stream is simple

Overwhelmed, time poor learners want mandatory learning experiences done with a minimum of fuss and need self-development opportunities highlighting quickly and easily.

Delivered as a 'Netflix'-style experience, Stream engages users from the first moment, becoming your organisation's hub for learning and personal development.

### Stream is smart

The competition for attention is extremely high; in order to get into focus we need to be present in the workflow and to be clever enough to make relevant recommendations.

### Stream is social

Social, because the skills that we need more of today, and won't be replaced by machines tomorrow, are all about people. And people learn from people.

Stream incorporates social elements that promote a culture of peer-to-peer learning. Our range of unique reporting tools allow you to visualise where change is really taking place across the organisation.

### The behaviours you need today and the skills you need tomorrow

Stream gives the power to deliver personalised streams of expert content and curated experiences, for what's needed today and tomorrow.

Out of the box self directed learning can be quickly and simply enhanced by experts in your organisation.

Stream makes it simple for your company to deliver on the promise of a true 'learning culture', enabling self-directed learners to help themselves and offering a platform for your subject matter experts to deliver programmes at scale.

## KEY FEATURES

- Integrates with Adapt Builder for content authoring
- Available with 'Future Skills' content to future-proof your business
- Ready to launch, Stream is quick to deploy and easy to integrate into your ecosystem

### Get straight to the point of need

Stream engages the learner wherever they are, and recognises that learning happens everywhere, designed to enhance performance in the modern workplace with minimum effort for the learner. Users can interact with learning the way they would interact with a colleague: conversational, collaborative, right here and right now. Stream exists as both a website and a bot (working within Slack, Microsoft Teams and Workplace by Facebook) to give maximum flexibility and to avoid users interrupting their day to go somewhere else for their learning.

### Deep search

Access to learning is never more than a click away and our deep search capabilities can search inside key documents, like PDFs and e-learning, to surface results without even accessing the document in question.

### We prioritise outcomes and experience, not just content

Learning happens everywhere and Stream recognises this in the wide variety of learning experiences it offers. From taking a course to having a conversation and teaching someone else to write a blog. Learners can choose from learning experiences recommended to them by Stream or add and share their own, making it truly personalised.

### Social

Stream social courses provoke meaningful discussions and take cohorts on a community driven learning experience. Any content on Stream can be used to promote conversation turning your learning platform into your company watercooler.

### Personalised recommendations

Our recommendation engine is designed to enhance the user experience so each user's experience will be unique. Following a short initial orientation, Stream personalises the learner's homepage to highlight content or activities relevant to them. Rather than bombarding with lots of options, we use feedback on how relevant our suggestions are to create better recommendations over time.

### Powered by data

Every user action is tracked using xAPI and processed by machine learning. Embedded analytics link learning to company performance.

## ONE ECOSYSTEM FOR THE MODERN LEARNER

Our ecosystem of tools will give our customers the power to deliver personalised streams of expert content and curated experiences, for what's needed today and tomorrow.
